

Quick Start Tutorial: How to run the Genius Environment

To install the environment, download the zip file [Genius 4.2](#). Unzip the file at a convenient location on your machine. The resulting folder, called **genius**, contains the files shown in the figure below:

In the Quick Start Tutorials we will refer to the following files and locations:

- **doc** – contains **userguide.pdf**
- **Agent Example** – contains the sample agent **SimpleAgent.java** which we will refer to in later tutorials
- **log** – when tournament logs are generated the XML files can be found in this folder
- **negosimulaor.jar** – Negotiation Simulator application

Run the negosimulator by double-clicking on the application or using “open with” and then selecting Java. Provide link to below error information:

Basic GUI Components:

The simulator screen consist of the Menubar, the Components Window, and the Status Window:

- **Menubar** – From the Start menu you can run a new negotiation or tournament
- **Components Window** – shows all available Scenarios, Agents, and BOA components
- **Status Window** – shows the negotiation status or selected domain/preference profile
