## ABSTRACT

In the 2010's it is widely recognized by computer and information scientists, social scientists, designers, and philosophers of technology that the design of information systems is not value neutral [5-8,11]. Rather, such systems are value laden in part because societal values are major factors in shaping systems, and at the same time the design of the technology reinforces, restructures or uproots societal value structures. Of the many theories and methods to design for this phenomenon one continues to gain traction for its systematic and overarching consideration of values in the design process: Value Sensitive Design (VSD) [5-7]. The aim of this multidisciplinary workshop is to bring together scholars and practitioners interested in the ways values can be made to bear upon design and to help continue to build a community by sharing experiences, insights, and criticism.

The literature and projects dedicated to and exploring both methodological and theoretical issues of VSD have grown exponentially in recent years. Despite the wide-scale uptake of the VSD approach, however, as one would expect for an approach that touches such basic human questions and continues to evolve, methodological and theoretical questions and controversies remain [1]. To that end, a forum is needed to bring researchers and designers together to grow a cohesive community and chart next steps for broadening the scope, methods, and application of VSD.

This workshop builds on previous work by the organizers and others to achieve the following objectives:

- Critically discuss experiences and case studies of VSD with a multidisciplinary group of researchers.
- Explore differences in VSD methods for short versus long-term projects. Discuss and critique various adaptations and appropriations of VSD.
- Identify open questions and grand challenges for the next decade of research and design work in VSD.
- Build a network of support among both novice and expert researchers and designers in VSD.

Discuss future directions, obstacles and opportunities for collaboration among the international community. **Keywords** Value Sensitive Design, Human-Computer Interaction, Technology and Human Values, Applied Ethics.

## 1. SIGNIFICANCE OF THE WORKSHOP

There are many reasons why a workshop organized around charting future directions for value sensitive design is timely and significant. For one, VSD has been a vibrant and developing approach for 20 years with an extensive body of work [1, 3, 5-8, 10, 13, 14]: the ACM Digital Library shows an increase in papers that mention "human values" from 20 in 2000 to 113 in 2010 [1]. Despite this increase in interest and scholarly productivity, the community of scholars, designers, and researchers working with VSD is rather dispersed; in fact, many of the researchers engaging with this approach have not met the others in person. It is time to bring these individuals together to develop a common research agenda and repository that novice and experts can access and build upon. This workshop will be the first event of its kind devoted to the analysis, development and critique of VSD as a theory, methods, and approach to design.

In addition, this workshop will facilitate a proactive meeting in which researchers can engage in the relationship between VSD and emerging technologies. Society is on the cusp of a radical change in computing, from personal computing to large-scale networked computing (e.g. the Internet of Things, ubiquitous computing, etc.), at work, at home and in public spaces. Robotics [13], multi-lifespan information systems [6], and big data science [2] are but three areas in which researchers have targeted the significant impact that VSD can have on the design process, not only to ensure value sensitive functionality, but also to inform policy makers and to increase the adoption of technologies with positive potential. Although VSD has been identified as a constructive tool for the future design of these and other technologies, there are still pressing questions that must be addressed to further this work. Now is a crucial moment for establishing a network of researchers for assistance, support, feedback and collaboration.

Perhaps the most compelling reason for a workshop to further a value sensitive design approach has to do with the speed at which emerging technologies are developing and the complexity of addressing related societal and ethical issues [4, 8, 10-13]. VSD shows great novelty and scope in that it allows for an approach to design that invites contributions and reflections from philosophers and ethicists alongside those of social scientists, behavioral scientists, computer scientists, and designers. VSD resists the tendency to only retrospectively assess or evaluate technologies, and instead invites proactive value analyses in conjunction with technology design and development. Rarely have multiple disciplines been engaged in such a collaborative feat. We believe that given this spirit of partnership, spanning multiple disciplines and contexts of research, researchers ought to have the opportunity to come together to meet, discuss and pave the way forward for VSD. Several Research Councils in Europe have embraced the conception of designing for moral values as a way of doing applied ethics of technology. For example, the Dutch Research Council initiated a research program entitled Responsible Innovation in 2007 that made the VSD paradigm central to its approach to ethics of technology. In turn, the European Commission – inspired by this approach – has made designing for values part of its large new 80 billion Euro R&D framework Horizon 2020 [9].

## 2. BENEFITS OF THE WORKSHOP

In addressing the aims and objectives listed above, this workshop has many benefits including but not limited to:

- Building an international, multidisciplinary community of VSD researchers involving novice and expert scholars from a variety of disciplines (e.g. artificial intelligence, computer science and engineering, design, ethics, human-computer interaction, information science, philosophy, sociology)
- Helping disseminate and further evolve VSD method, including methods for: discovering, articulating and communicating values and value considerations; engaging with emergent values; addressing value tensions; evaluating resulting technologies; and selecting among and combining diverse methods
- Revealing areas and opportunities for future directions
- Paving the way for large-scale applications of VSD across institutions and countries

## 3. OVERVIEW OF THE WORKSHOP

### 3.1 Participants and recruitment strategy

The intended workshop size is 15-20 people to ensure a fruitful discussion and to develop a thoughtful action plan for bringing VSD to a larger scale that can begin to account for identified challenges of the emerging networked society. We aim for a multidisciplinary group of workshop participants to shed light on the coming challenges from different perspectives. In particular, we welcome researchers in artificial intelligence, computer science and related engineering fields, data science, design, e-social sciences, ethics, human-computer interaction, intelligent systems, philosophy, and sociology. Recruitment will be carried out through our personal network of VSD scholars as well as by disseminating the call for participation via mailing lists and relevant websites (see 3.2).

### 3.2 Workshop Planning

**Pre-workshop:** An outline of the workshop's topic, goals, and a call for participation will be disseminated via various mailing lists (e.g. CHI-ANNOUNCEMENTS@listserv.acm.org; announcements.eu.nordichi@maillist.au.dk; valuesindesign@tudelft.nl; anthrodesign@yahoogroups.com; and others); websites (www.vsdesign.org; ethicsandtechnology.eu and others); and social outlets via a workshop's Twitter account.

Prospective participants are invited to submit short papers including design case studies, critical reflections, and visionary perspectives on VSD. At least one author of each accepted paper or project will be required to attend the workshop. Submissions will undergo juried review by the workshop organizers and international experts in the field. Authors will have an opportunity for revision based on the reviews. Revised papers will be shared with all participants in advance of the workshop to familiarize everyone with the case studies and diverse views on the topic.

**One-day Workshop:** Preliminary Agenda and Discussion Topics

(1.5 hour) Welcome. Explicate and discuss the history of Value Sensitive Design (VSD) in the last 20 years, the variety of uses and adaptations and the particular goals of this workshop. Key questions: What does VSD mean to different disciplines? How has VSD been used to date? What are some of the paradigmatic case studies that illustrate that utility and benefits of VSD? What are some of the key methods or methodological commitments? What are some of the major case studies that challenge VSD as a theory and/or approach for design?

(30 min.) Break.

(1 hour) Break out session into groups of 4-5: Discuss the short case studies of participants' experience with VSD prepared by participants prior to the workshop. Elaborate on these cases. Begin to identify common threads. Key questions: What common issues arise across the cases? What are the characteristics of successful case studies? What are the characteristics of less successful case studies? How do the cases help us to better understand the strengths and weaknesses of the VSD approach?

(30 min.) Reconvene, with brief reports from each group back to the whole.

(1 hour) Lunch (Informal discussion continues...)

(1.5 hours). Generate common threads among the participants to chart the next steps for VSD. Key questions: What overarching themes can we extract from the cases we have shared and studied? How can these themes be operationalized? Looking forward, what contexts of study might be most relevant to pursue? What problems should VSD target? What types of technology should VSD target? What kinds of researchers might act as part of the VSD team or as a values advocate? What would be a good set of the important questions or grand challenges for value sensitive design to take up in the coming decade?

(30 min.) Break

(45 min.) Concrete next steps. Consolidate the common themes. Then identify open questions or grand challenges for value sensitive design for the coming decade.

(45 min.) Discuss dissemination of workshop results, next activities, and future directions. Key questions: How can workshop participants make use of the workshop results in their

own work? How can workshop participants spread their knowledge of VSD? At which conferences and forums might the participants try to reconvene?

**Post-workshop:** Papers and projects presented at the workshops, as well additional resources identified and created through workshop discussion and group activities will be collected and made available online through a wiki-based website/VSD repository.

After the workshop, participants will be invited to submit extended versions of their work for inclusion in a special issue of the *Journal of Ethics and Information Technology*. We will also maintain a VSD mailing list to allow for future workshops or a VSD conference series to be organized.

#### 4. WORKSHOP ORGANIZERS

**Batya Friedman**, PhD, is a Professor in the Information School, Adjunct Professor in the Department of Computer Science, and Adjunct Professor in the Department of Human-Centered Design and Engineering at the University of Washington where she co-directs the Value Sensitive Design Research Lab. She pioneered value sensitive design and continues to explore new theory and methods as well as open questions within this approach.

**David G. Hendry**, PhD, is an Associate Professor in the Information School at the University of Washington where he co-directs the Value Sensitive Design Research Lab. He has applied and extended value sensitive design in a variety of domains and populations including working with homeless young people and with bringing value sensitive design thinking into technical education at the undergraduate and graduate level.

**Catholijn Jonker**, PhD, is head of the Design Engineering department of the Faculty of Industrial Design and member of the Interactive Intelligence Group of the INSY department of the Faculty of EEMCS. [NEED SOME TEXT FOR CATHOLIN AND HER CONNECTION WITH VSD.]

**Alina Huldgtren**, PhD, is an Assistant Professor of Human-Computer Interaction at the School of Innovation Sciences at Eindhoven University of Technology. Her research concentrates on user-centered and value sensitive design of human-technology interfaces for healthcare, aging well and digital augmentation of public spaces. She has previously organized two workshops on values in design at the INTERACT and CHI conferences.

**Jeroen van den Hoven**, PhD, is full professor of Ethics at Delft University of Technology. He is Head of Department of the Department of Values, Technology and Innovation. His research is concerned with ethical issues in new technology. He is Editor in Chief of *Ethics and Information Technology* (Springer) and has advised Dutch government and EU in different roles concerning ethics of information and communication technology and responsible innovation.

**Aimee van Wynsberghe**, PhD, is an Assistant Professor in Ethics of Technology at the University of Twente, the Netherlands. With a background in applied ethics, her research concentrates on the normative foundations for value sensitive design and its application to robotics, healthcare technologies and other ICT.

#### 5. ACKNOWLEDGMENTS

We thank Alan Borning who provided comments on this workshop proposal.

=====CALL FOR PARTICIPATION=====

Workshop on *Charting the Next Decade for Value Sensitive Design* held in conjunction with Critical Alternatives 2015  
Aarhus, Denmark

Workshop website: TBA

=====IMPORTANT DATES=====

Position paper submission: 15 May 2015  
Notification: 15 June 2015  
Workshop Dates: 17 or 18 August, 2015

=====ORGANIZERS=====

**Batya Friedman**, Professor, The Information School, University of Washington

**David G. Hendry**, Associate Professor, The Information School, University of Washington

**Jeroen van den Hoven**, Professor of Ethics and Technology, Department of Technology, Policy and Management, Delft University of Technology

**Alina Huldtgren**, Assistant Professor of Human-Computer Interaction, Department of Industrial Engineering and Innovation Sciences, Eindhoven University of Technology

**Aimee van Wynsberghe**, Assistant Professor of Philosophy of Technology, Department of Philosophy, University of Twente

=====AIMS AND SCOPE=====

This workshop brings together scholars of human-centered computing, computer sciences, intelligent systems, ethics, philosophy and related fields to critically discuss their experiences, case studies and critical reflections of using value sensitive design (VSD) and setting the agenda for VSD in the next decade. The workshop intends to:

- \* Build a network of support between the novice and expert researchers in VSD
- \* Discuss and critique various adaptations and appropriations of VSD
- \* Explore differences in VSD methods for short versus long term projects
- \* Discuss opportunities for collaboration among the community (e.g. establishing an online VSD repository)
- \* Reflect on the last 20 years of VSD research and create a roadmap for VSD in the coming decade

Value Sensitive Design is a well-established design framework for accounting for designers' and stakeholders' values in ICT design. With the growth of the world-wide VSD community in the last 20 years, the framework has matured, a multitude of VSD-specific methods have been developed and design cases in diverse domains (e.g. medical applications, homelessness, urban planning, robotics) have been carried out. This is a good time to take a step back, reflect on the achievements of the last 20 years and discuss open issues and new directions for the future. In particular, it is our intention to strengthen the VSD community across different countries and disciplines, support novice researchers in the field, and work towards a shared repository of VSD theories and practices.

While VSD has proven to be a guiding methodology for the design of ICT systems that go beyond mere usability and user experience, new challenges lie ahead. With the ongoing changes from personal computing to large networked systems and computation embedded into the environment we need to shift our focus from single user values to social values. Working together across disciplines on value sensitive solutions in the age of ubiquitous computing is indispensable and setting the roadmap for this endeavor is one of the foci of this workshop.

The following list reflects (but is not limited to these) possible topics for workshop papers:

- \* VSD cases highlighting: designing for a particular value, aspects of the design process, VSD in particular domains (healthcare, intelligent systems, robotics, multi-lifespan computer systems...)
- \* Lessons learned/ Critical reflection on VSD in the last 20 years
- \* New methods for discovering, communicating, trading-off values
- \* Evaluations of VSD processes and resulting technologies
- \* Values in emerging ICTs (e.g. interpretive flexibility, infinite number of ethical problems due to many possible futures)
- \* VSD's role in Big Data Sciences, e-Social Sciences and Digital Humanities
- \* VSD in the age of pervasive/ubiquitous computing (smart homes, smart cities, Internet of things, quantified self...)
- \* VSD's role in informing policy-making
- \* Revealing areas and opportunities for future directions
- \* Ideas for VSD practice across institutions
- \* Perspectives for future large-scale applications of VSD

## PAPER SUBMISSION & PUBLICATION

---

We invite scholars working on topics related to value sensitive design of technology to submit 2-4 page position papers in the ACM SIG Proceedings template (<http://www.acm.org/signs/publications/proceedings-templates>). We welcome both theoretical papers that indicate how the theory can be used to advance the VSD framework as well as practical and empirical papers that provide insights into VSD design cases. We also welcome papers that discuss (positive and negative) experiences and lessons learned related to the application of VSD. In particular, we invite papers describing:

- \* a case study using value sensitive design
- \* a critical perspective on value sensitive design
- \* a new perspective for value sensitive design for the next decade

Papers should not be anonymized and will be assessed on their quality by an international jury of VSD scholars. Authors of accepted papers must guarantee that one author is present at the workshop. Position statements will be presented as short presentations (2-5 min) during the workshop.

Submissions to the workshop should be sent to **Aimee van Wynsberghe** ([A.L.vanwynsberghe@utwente.nl](mailto:A.L.vanwynsberghe@utwente.nl)). Papers will be published on the workshop website and possibly a VSD online repository. A selection of accepted papers will be invited to submit to a special issue of the *Journal of Ethics and Information Technology*.

Please direct any questions concerning this Call for Participation or the workshop to: [A.L.vanwynsberghe@utwente.nl](mailto:A.L.vanwynsberghe@utwente.nl)
